    |-----
    Authentication Defaults
    | This option controls the default authentication "guard" and password
    reset options for your application. You may change these defaults
    as required, but they're a perfect start for most applications.
    * /
    'defaults' => [
       'guard' => 'web',
       'passwords' => 'users',
    ],
    Authentication Guards
    | Next, you may define every authentication guard for your application.
    Of course, a great default configuration has been defined for you
    | here which uses session storage and the Eloquent user provider.
    | All authentication drivers have a user provider. This defines how the
    | users are actually retrieved out of your database or other storage
    mechanisms used by this application to persist your user's data.
    | Supported: "session"
    'guards' => [
       'web' => [
           'driver' => 'session',
           'provider' => 'users',
       ],
    ],
    | User Providers
    | All authentication drivers have a user provider. This defines how the
    users are actually retrieved out of your database or other storage
```

```
| If you have multiple user tables or models you may configure multiple
| sources which represent each model / table. These sources may then
| be assigned to any extra authentication guards you have defined.
| Supported: "database", "eloquent"
* /
'providers' => [
   'users' => [
       'driver' => 'eloquent',
       'model' => App\Models\User::class,
   ],

         'driver' => 'database',
         'table' => 'users',
   // ],
],
Resetting Passwords
|-----
You may specify multiple password reset configurations if you have more
| than one user table or model in the application and you want to have
| separate password reset settings based on the specific user types.
| The expiry time is the number of minutes that each reset token will be
| considered valid. This security feature keeps tokens short-lived so
| they have less time to be guessed. You may change this as needed.
| The throttle setting is the number of seconds a user must wait before
generating more password reset tokens. This prevents the user from
| quickly generating a very large amount of password reset tokens.
* /
'passwords' => [
   'users' => [
       'provider' => 'users',
       'table' => 'password_reset_tokens',
       'expire' => 60,
       'throttle' => 60,
   ],
],
| Password Confirmation Timeout
|-----
```

mechanisms used by this application to persist your user's data.

```
Here you may define the amount of seconds before a password confirmation times out and the user is prompted to re-enter their password via the confirmation screen. By default, the timeout lasts for three hours.

* The PDF rendering backend to use
* Valid settings are 'PDFLib', 'CPDF' (the bundled R&OS PDF class), 'GD' and
* 'auto'. 'auto' will look for PDFLib and use it if found, or if not it will
* fall back on CPDF. 'GD' renders PDFs to graphic files.
* {@link * Canvas_Factory} ultimately determines which rendering class to
* instantiate based on this setting.
* Both PDFLib & CPDF rendering backends provide sufficient rendering
* capabilities for dompdf, however additional features (e.g. object,
* image and font support, etc.) differ between backends. Please see
* {@link PDFLib_Adapter} for more information on the PDFLib backend
* and {@link CPDF_Adapter} and lib/class.pdf.php for more information
* on CPDF. Also see the documentation for each backend at the links
* below.
* The GD rendering backend is a little different than PDFLib and
* CPDF. Several features of CPDF and PDFLib are not supported or do
* not make any sense when creating image files. For example,
* multiple pages are not supported, nor are PDF 'objects'. Have a
* look at {@link GD_Adapter} for more information. GD support is
* experimental, so use it at your own risk.

         * /
        'default_font' => 'serif',
        /**
         * Image DPI setting
         * This setting determines the default DPI setting for images and fonts. The
         * DPI may be overridden for inline images by explictly setting the
         * image's width & height style attributes (i.e. if the image's native
         ^{\star} width is 600 pixels and you specify the image's width as 72 points,
         * the image will have a DPI of 600 in the rendered PDF. The DPI of
         * background images can not be overridden and is controlled entirely
         * via this parameter.
         * For the purposes of DOMPDF, pixels per inch (PPI) = dots per inch (DPI).
         * If a size in html is given as px (or without unit as image size),
         * this tells the corresponding size in pt.
         * This adjusts the relative sizes to be similar to the rendering of the
         * html page in a reference browser.
         * In pdf, always 1 pt = 1/72 inch
         * Rendering resolution of various browsers in px per inch:
         * Windows Firefox and Internet Explorer:
                   SystemControl->Display properties->FontResolution: Default:96, largefonts:120,
custom:?
         * Linux Firefox:
            about:config *resolution: Default:96
            (xorg screen dimension in mm and Desktop font dpi settings are ignored)
```

```
* Take care about extra font/image zoom factor of browser.
         * In images, <img> size in pixel attribute, img css style, are overriding
         * the real image dimension in px for rendering.

return [
   |-----
   Default Session Driver
   |-----
   | This option controls the default session "driver" that will be used on
   requests. By default, we will use the lightweight native driver but
   you may specify any of the other wonderful drivers provided here.
   | Supported: "file", "cookie", "database", "apc",
            "memcached", "redis", "dynamodb", "array"
   'driver' => env('SESSION_DRIVER', 'file'),
   | Session Lifetime
   |-----
   | Here you may specify the number of minutes that you wish the session
   | to be allowed to remain idle before it expires. If you want them
   to immediately expire on the browser closing, set that option.
   'lifetime' => env('SESSION_LIFETIME', 120),
   'expire_on_close' => false,
   |-----
   | Session Encryption
   |-----
   | This option allows you to easily specify that all of your session data
   | should be encrypted before it is stored. All encryption will be run
   automatically by Laravel and you can use the Session like normal.
   'encrypt' => false,
```

```
| Session File Location
______
| When using the native session driver, we need a location where session
| files may be stored. A default has been set for you but a different
| location may be specified. This is only needed for file sessions.
* /
'files' => storage_path('framework/sessions'),
| Session Database Connection
|-----
When using the "database" or "redis" session drivers, you may specify a
| connection that should be used to manage these sessions. This should
correspond to a connection in your database configuration options.
'connection' => env('SESSION_CONNECTION'),
| Session Database Table
|-----
| When using the "database" session driver, you may specify the table we
| should use to manage the sessions. Of course, a sensible default is
| provided for you; however, you are free to change this as needed.
'table' => 'sessions',
I-----
Session Cache Store
I-----
| While using one of the framework's cache driven session backends you may
list a cache store that should be used for these sessions. This value
| must match with one of the application's configured cache "stores".
Affects: "apc", "dynamodb", "memcached", "redis"
'store' => env('SESSION_STORE'),
```

```
______
| Session Sweeping Lottery
______
| Some session drivers must manually sweep their storage location to get
| rid of old sessions from storage. Here are the chances that it will
| happen on a given request. By default, the odds are 2 out of 100.
* /
'lottery' => [2, 100],
| Session Cookie Name
|-----
Here you may change the name of the cookie used to identify a session
| instance by ID. The name specified here will get used every time a
| new session cookie is created by the framework for every driver.
* /
'cookie' => env(
  'SESSION_COOKIE',
  Str::slug(env('APP_NAME', 'laravel'), '_').'_session'
),
| Session Cookie Path
|-----
| The session cookie path determines the path for which the cookie will
| be regarded as available. Typically, this will be the root path of
your application but you are free to change this when necessary.
'path' => '/',
|-----
Session Cookie Domain
|-----
Here you may change the domain of the cookie used to identify a session
| in your application. This will determine which domains the cookie is
available to in your application. A sensible default has been set.
* /
'domain' => env('SESSION_DOMAIN'),
```

```
/*
|-----
| HTTPS Only Cookies
| By setting this option to true, session cookies will only be sent back
| to the server if the browser has a HTTPS connection. This will keep
the cookie from being sent to you when it can't be done securely.
* /
'secure' => env('SESSION_SECURE_COOKIE'),
|-----
| HTTP Access Only
|-----
| Setting this value to true will prevent JavaScript from accessing the
| value of the cookie and the cookie will only be accessible through
the HTTP protocol. You are free to modify this option if needed.
* /
'http_only' => true,
|-----
| Same-Site Cookies
|-----
| This option determines how your cookies behave when cross-site requests
| take place, and can be used to mitigate CSRF attacks. By default, we
| will set this value to "lax" since this is a secure default value.
| Supported: "lax", "strict", "none", null
'same_site' => 'lax',
|-----
| Partitioned Cookies
|-----
| Setting this value to true will tie the cookie to the top-level site for
a cross-site context. Partitioned cookies are accepted by the browser
| when flagged "secure" and the Same-Site attribute is set to "none".
* /
'partitioned' => false,
